

WIRELESS SET TOP BOX

EACH BOX NEEDS TO BE PAIRED TO THE VIDEO ACCESS POINT (VAP) SO THIS PROCESS WILL NEED TO BE FOLLOWED FOR EACH NEW BOX BEING INSTALLED.

Only one box can be paired at a time.

Power On

Plug in the power cord to the wireless box and to a power outlet. Connect the wireless box to the television using either HDMI or component cords. Turn on the television. When you see the image above on the screen, the box will be ready and waiting to be paired with the VAP.

Connect

Press the Connect button on the VAP (button above the Model Number, VAP3402). When the green LED light (located above the words "WiFi Certified") starts to blink, the VAP is ready to pair to the box. You may have to press the Connect button more than once.

Pair

In step 1, the box was powered on in preparation for pairing to the VAP. How you complete the connection depends on the type of box:

- a. If your box is the Arris 2502w, press the "OK" button on the front of the box.
- b. If your box is the Arris 5602w wireless non-DVR or the Arris 5662w wireless DVR, press the "OK" button on your remote.

It will take a few minutes to download the software. Once completed, you can watch TV.
